**“A good reputation must be earned.”**

August Hörmann (1886-1944)

In line with the founder’s philosophy, the Hörmann brand today is a true promise of quality. The family-owned company has more than 80 years of experience in door and operator construction and is one of the leading manufactures in Europe, with sales of over 20 million doors. This makes a Hörmann sectional door a reassuring purchase.

**Brand quality from Germany**

All doors and operator components developed and manufactured by Hörmann are well matched to each other as well as being tested and certified by independent, recognised institutes to ensure your safety. All doors are manufactured according to the DIN EN 9001 quality management system and meet the requirements of European standard 13241-1. Furthermore, our experienced employees work intensively on new products, continual further developments and improvements to details, which contributes to our patents and good products on the market.

**Garage doors for generations**

Endurance tests under real conditions ensure mature series products with Hörmann quality. Thanks to good technical solutions and uncompromising quality assurance, you will receive a reliable warranty on all sectional doors and operators.

**Competent advice**

Experienced specialists from our customer-orientated sales organisation accompany you from the planning stage, through technical clarification up to the final building inspection. Complete working documentation, such as technical manuals, is not only available in printed form, apart from that it is always accessible and up-to-date at [www.hoermann.com](http://www.hoermann.com).

## Benefit from numerous advantages

Sectional doors always fit and save space

Sectional doors open vertically upwards and are suspended under the ceiling to save space. This construction principle means you can make full use of the space inside and in front of the garage. Additionally, sectional garage doors can be fitted in every garage door opening, providing you with a wider passage in width and better sealing.

**Treat yourself to this comfort and convenience.**

**Make better use of inside and outside space  
More freely enter and exit the garage**

### For various fitting situation

The shape of the garage door opening is not of prime importance. Whether square, angled, with segmental or full centred arch – a sectional door always fits.

Narrow passage width with old up-and-over doors

Complete passage width with modern sectional doors

### Wider passage

With older up-and-over doors, driving in and out is often a matter of millimetres. Sectional doors with a passage width extended by up to 14 cm also make it much easier to park modern, larger vehicles and SUVs.

### Sealed all-round

Flexible and weather-resistant seals on all four sides of Hörmann's sectional doors keep out the wind, rain and snow. Good-quality intermediate seals between the door sections of double-skinned doors provide for additional sealing. Thanks to its large-sized profile lip, the bottom seal can easily accommodate slight irregularities in the floor.

## Good reasons to try Hörmann

### Delicate appearance

# 1

## Various surface finishes

**Elegant surface decors to choose**  
Hörmann provides various surface finishes to meet various kinds of requirements. Woodgrain surface finish is standard in RAL 9016, Grey RAL 9002, White aluminum RAL 9006 and Anthracite grey RAL 7016, optionally in around 200 colours from the RAL colour chart. Micrograin is standard in Traffic white RAL 9016, Grey RAL 9002, White aluminum RAL 9006 and Anthracite grey RAL 7016. We also provide Decograin surface finishes in Golden Oak and Rosewood.

# 2

## More security, of course

**Automatic door locking**  
Uninvited guests barely stand a chance with Hörmann automatic sectional doors. When the garage door is closed, the anti-lift kit automatically engages in the operator boom's stop, it then locks immediately and is secured against forced opening. This door latching functions pretty good, and in contrast to competitor operators, continues to secure the door even when the power fails.

## Good reasons to try Hörmann

### Innovations from the market leader

# 3

## Good long-term protection

**Also resistant to waterlogging**  
A non-brittle, 4 cm plastic frame shoe offers long-term protection against corrosion (even with waterlogging) that is unmatched by competitor solutions. The frame shoe completely covers the frame in the area susceptible to rust. Only this offers true long-term protection. Together with the door's bottom seal, the frame shoe makes for a bottom edge that is visually appealing.

# 4

## Efficient thermal insulation

**With thermal break between the frame and the building structure**  
A well-insulated garage door is always recommended when the garage and the home are directly connected. To further improve the already good insulation values, Hörmann has developed the ThermoFrame frame connection, a plastic profile that can be simply fitted together with the door frame. This creates a thermal break between the frame and the brickwork, improving thermal insulation by up to 15%\*. The optional ThermoFrame frame connection is available for all Hörmann sectional doors.

\* With a door surface of 5000 x 2125 mm

**Tested safety**

Hörmann automatic sectional doors have been tested and certified by TÜV in accordance with the TTZ directive "Break-in resistance for garage doors".

**Good reasons to try Hörmann**

**Hörmann BiSecur: The modern radio system for garage door and entrance gate operators**

**5**

**Fascia panels as standard**

**6**

**Side wall fitting, no problem**

**7**

**Bi-directional radio system BiSecur**

**Make up for insufficient headroom**

For garage doors, the fascia panel is a good practical solution to make up for insufficient headroom. For all door versions, our standard fascia panels always match the door colour or style and can thus be visibly mounted in the opening. The standard single-skinned fascia panel which is 95 mm high can meet most situations.

**Properly adjusted installation solution**

The sectional door frame can be fitted to the side wall of the garage with Hörmann universal anchors. Irregularities in the wall can be easily compensated, leaving the reveal intact.

**The modern radio system for garage door and entrance gate operators**

Our bi-directional, good-security BiSecur radio system is based on future-oriented technology that allows you to conveniently and safely operate garage doors, entrance gates, lights and much more. With a stable, interference-free range, the newly developed, secure BiSecur encryption protocol makes sure that no-one can copy your radio signal. Tested and certified by security experts at the Bochum University and as safe as online banking.

**Convenient inquiry of the door position**

You no longer have to go out in all kinds of weather to check if your garage door is closed. With a single push of a button, the LED colour on the hand transmitter HS 5 BS shows you whether the door is open or closed. If required, another push of a button closes the door.

# Double-skinned steel sectional door LPU 42

Good thermal insulation and wide variety of surface finishes

## LPU

Double-skinned LPU 42 doors offer good insulation. Moreover, the 42-mm-thick sections give the door the greatest stability and make for quiet operation.

### Woodgrain

Traffic white RAL 9016

Woodgrain is standard in Traffic white RAL 9016, Grey RAL 9002, White aluminum RAL 9006 and Anthracite grey RAL 7016, optionally in around 200 colours from the RAL colour chart.

The surfaces are well protected against rust. Rain runs off without leaving any streaky marks thanks to the use of hot-galvanised material and a good-quality polyester-primer coating on both sides. A grey haze from air pollution is largely prevented.

On this inexpensive, robust surface with an authentic sawn timber look, minor scratches can be easily repaired by working with the texture.

#### Door styles

M-ribbed  
S-panelled

### Micrograin

Traffic white RAL 9016

This surface features a wave profile that is embossed into smooth steel, producing attractive light and shadow effects.

Micrograin is standard in Traffic white RAL 9016, Grey RAL 9002, White aluminum RAL 9006 and Anthracite grey RAL 7016.

#### Door styles

L-ribbed

### Decograin

Golden Oak

Decograin is available in two natural-looking timber designs. An embossed wood grain gives it all the aesthetics of timber. The door remains beautiful for a long time thanks to the surface protection of the UV-resistant plastic film coating on the outside of the steel sections.

This finely structured surface is an ideal choice for price-conscious owners and is suited for modern homes.

Silver cast aluminium

Brown cast aluminium, RAL 8028

## More convenient solution for emergency situation

For sectional garage doors without a second access door, we recommend the emergency release with door handle to deal with the emergency situation (e.g. in the event of a power failure). You can easily open the garage door manually from the outside by using the key and handle as well as the clutch pull wire connected to it internally.

Exterior handle with keys

Interior handle with Bowden cable

Clear synthetic glazing from Hörmann comes as standard with DURATEC glazing. It offers max. scratch resistance

### Aluminium frame

Available for both panelled and ribbed design. The anodised aluminium glazing frame (DIN 17611) in a natural finish E6 / C0 (previously E6 / EV 1) is available on request in door colour. You can choose the glazing with double synthetic panes in a clear version or crystal structure.

### Classic glazing

### Sunrise glazing

## Modernise and improve

Hörmann offers ideal solutions for every fitting and renovation situation

It is an exciting and pleasant experience to renovate your old garage door. The key point is to select the correct products: Hörmann can not only provide garage doors with various dimensions and finishes, but also multiple mounting methods based on the opening structure of garage doors, so as to tackle any possible problems during the door's renovation.

Experienced consultation from Hörmann

### Everything from a single source with your Hörmann partner

Your Hörmann service partner can make modernisation easier than you think: from personal consultation to proper disassembly and environmentally-friendly disposal of your old door, as well as correct dimensioned fitting.

### Trouble-free, simple fitting

For standard fitting, Hörmann delivers the sectional doors with all necessary fitting material, makes the fitting and maintenance more simple and easy.

Your Hörmann partners will gladly explain the benefits of a sectional garage door.

### Neat gap treatment for an attractive appearance

Hörmann offers attractive solutions for every fitting situation. This saves fitting time and reduces costs. Visible gaps between frames and the reveal can thus be covered with a frame covering, an optional retrofit fascia or a fascia frame set. Of course, all this comes in surface finishes and colours that match the door.

Your door is fitted within a day – of course with operator plus convenient remote control

## Properly mounted and fitted

### Standard fitting and special anchors for side fixing

#### Standard fitting

The sectional door can be fitted behind the opening [1]. The reveal guarantees stable fitting. This allows the frame to be screwed directly into the wall behind the opening.

Ideally, the available garage has at least 115 mm of clearance in the lintel area and a 90 mm sideroom.

**Hörmann sectional doors come with all the necessary fitting materials for this situation.**

#### Optional special anchor for frame side fixing

The sectional door frame can be fitted to the side wall of the garage with Hörmann's universal anchors. Irregularities in the wall can be easily compensated, leaving the reveal intact.

[2] Fitting with up to 35 mm wall spacing

[3] Fitting with angled or irregular side wall

[4] Fitting with non-load bearing facades (facing brick or thermal insulation) with at least 90 mm sideroom

#### Please note:

If the door is fitted in the opening by side fixing anchor, the ordering width and ordering height of the door should be reduced accordingly.

## Properly adjusted

### Frame covering and fascia panels

#### Frame covering in the colour of the door

At Hörmann, side frames are delivered in smooth white as standard. With a frame covering that matches the door sections' colour or decor, you can also achieve a harmonious appearance for doors with different surface finishes.

[5] [6] 90-mm-wide frame covering for fitting behind the opening, with little sideroom

#### Standard fascia panels

**For standard fitting behind the opening with small lintel space**

For all door versions, our standard fascia panels always match the door colour or style and can thus be visibly mounted in the opening.

#### Double-skinned fascia panels

**For fitting in the opening with larger gap to the ceiling**

A matching, double-skinned additional fascia panel covers the gap between the ceiling and fascia panel. It is available for all surface finishes and colours or designs.

**Hörmann's good-quality garage door operators**  
Reliable, safe and maintenance-free

*Garage door and entrance gate operators:  
Well matched from a single source*

Hörmann operator technology  
Sophisticated and innovative technology that makes your life more convenient and safe.

Garage Door  
and Entrance Gate Operators

found in the Garage door and  
entrance gate  
operators brochure.

## Three operator variants

Security both day and night with automatic locking

### SupraMatic P4

- Energy saving LED\* lights for the garage
- Low power consumption in standby below 1 watt
- 75 % faster opening speed compare to the ProMatic 3 operator
- Smart operation with the BlueSecur app
- Net worked with Smart Home systems via the standard HCP interface
- Standard with HSE 4 BS hand transmitter

### ProMatic 4

- Energy saving LED\* lights for the garage
- Low power consumption in standby below 1 watt
- 40 % faster opening speed compare to the ProMatic 3 operator
- Net worked with Smart Home systems via the standard HCP interface
- Standard with HSE 4 BS hand transmitter

**BiSecur**

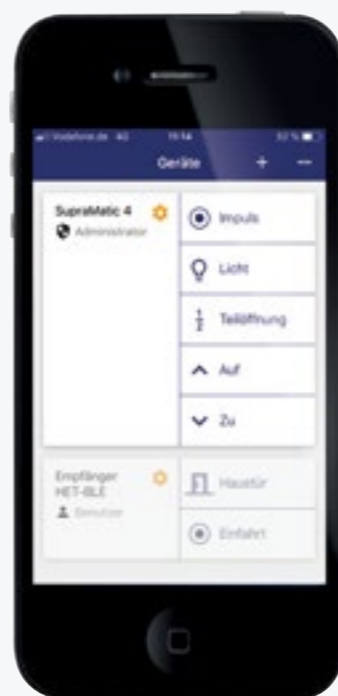

Standard 4-button hand transmitter HSE 4 BS, textured surface black with chrome caps

**Hörmann BlueSecur**

Garage door operators	ProMatic 4	SupraMatic P
Bluetooth receiver	Optional (HET-BLE receiver)	Integrated, can be switched on and off
HCP bus connection	Integrated	Integrated
Cycles per day / hour	25 / 10	50 / 10
Pull and push force	600 N	750 N
Peak force	750 N	1000 N
Max. opening speed	20 cm/s	25 cm/s**
Lighting	10 LED lights	30 LED chase light
Max. door width	5000 mm	6000 mm
Max. door surface	11 m <sup>2</sup>	15.2 m <sup>2</sup>

\* 5 times brighter with the SupraMatic P in comparison to the ProMatic series 3

\*\* Up to 9 m<sup>2</sup> door leaf surface with SupraMatic P, up to max. 22 cm/s for larger door surfaces

Standard Bluetooth receiver in SupraMatic 4 for smartphone operation using the Hörmann BlueSecur app

### SupraMatic HT

Smart operator  
More power, more function and faster speed  
Standard with black HS 5 BS hand transmitter  
For garage doors in size from 15.2 m<sup>2</sup>

Photocell EL 101

### Increased security

Families with children particularly appreciate extra safety. A photocell installed in the garage opening immediately stops the door before it encounters an obstruction, which needs just a little bit extra expense but for a more extensive protection.

**Hand transmitter  
HS 5 BS**

plastic caps // **NEW**

**Fingerscan FL 12/FL 100**  
**FL 12:**  
• Up to 12 fingerprints can be taught in  
• Setting / programming via DIL switches on the interior device  
• Impulse duration: 0.5 s or 5 s  
**FL 100:**  
• Up to 100 fingerprints can be taught in  
• Setting / programming via 3 buttons and two 7-segment displays on the interior device  
• Impulse duration: programmable from 0.5 s – 90 s

**Code switch CTR 1b/3b**  
**CTR 1b:** 1 relay output for control of one door operator  
**CTR 3b:** 3 separate relay outputs for the control of 2 operators and/or choosing the direction, second opening height, yard illumination, Stop

**Transponder key switch in two versions TTR100/TTR1000**  
You simply hold the coded transponder key approx. 2 cm in front of the reader. Two keys are included, further keys are available on request.  
The comfortable TTR can recognise up to 100 keys and TTR 1000 up to 1000 keys.

**Key switch STUP, STAP**  
For recessed or surface mounting in two versions, each with three keys.

**Photocell EL 101**  
For indoor use as additional safety device

## Technically mature

Operating comfort with good security

Safety while operating the garage door is important for Hörmann. Hörmann sets the standards for this with its innovative solutions. This has been proved again and again through numerous Hörmann patents.

**And this provides you and your family with safety during daily use.**

Hörmann patent

### Tension spring assembly with spring-in-spring system

Hörmann sectional doors with double tension springs and double cables per side safeguard the door leaf against crashing to the floor. Thanks to the patented spring-in-spring system, broken springs are prevented from flying out and causing injuries.

Sectional doors up to 3000 mm wide and 2625 mm high include the proven tension spring technology as standard.

Hörmann patent

### Torsion spring technology with integrated spring safety device

Hörmann sectional doors incorporate torsion springs on both sides featuring a patented spring safety device. In the event of a spring breaking, they arrest the door immediately, thereby preventing the door leaf from crashing to the floor. Larger sectional doors feature torsion spring technology.

Hörmann patent

### Secure guidance of the door in safety tracks

Adjustable, patented track rollers, sturdy roller holders and safety tracks ensure that there is no danger of the door "derailing". The door sections are safely parked under the ceiling.

### Finger trap protection on the inside, outside and on the hinges

The unique form of the door sections eliminates trap points, both between the sections and on the hinges. This reliable finger trap protection is offered by Hörmann.

### Trap guard on the side frame

With Hörmann, the frames are completely closed from top to bottom. There are no gaps between the door leaf and frame in which fingers could get trapped!

### Safety features in accordance with European standard 13241-1

#### Anti-fall safeguard / trap protection

Hörmann sectional doors are tested and certified in accordance with the good safety requirements of European standard 13241-1, not only on their own but also in combination with operators. It would be hard to find a safer sectional door.

**Hörmann garage door is your ideal choice!**

## Good thermal insulation

Tested and certified

A well insulated garage door is always recommended when the garage and the home are directly connected. The ThermoFrame frame connection further improves the already good insulation values of the double-skinned Hörmann sectional garage doors.

**This reduces your energy costs.**

### ThermoFrame Improved thermal insulation for sectional doors

The plastic profile that can be simply fitted together with the door frame, creates a thermal break between the frame and the brickwork, improving the thermal insulation by up to 15%\*.

In addition, extra lip seals on both sides and in the upper section of the door provide better sealing while lowering the loss of heating energy from the garage interior.

The ThermoFrame frame connection is optionally available for all Hörmann sectional garage doors.

\* For door size 5000 x 2125 mm

### Performance characteristics according to European standard 13241-1

At Hörmann, the four important characteristics of thermal insulation, acoustic insulation, tightness and sealing, and wind load for garage doors are tested and certified.

#### Thermal insulation

Section	U = 0.5 W/(m <sup>2</sup> ·K)
Door leaf	U = 0.9 W/(m <sup>2</sup> ·K)
Fitted door <sup>1)</sup>	U = 1.4 W/(m <sup>2</sup> ·K)

#### Acoustic insulation

R = approx. 25 dB

<b>Air</b>	M-ribbed	Class 2
	L-ribbed and Panelled	Class 3

**Water** Class 3 <sup>2)</sup>

**Wind load** Class 3

<sup>1)</sup> The U-values apply to fitted doors without glazing in the size: 5000 x 2125 mm

<sup>2)</sup> Up to 70 Pa water pressure

## Experience Hörmann quality

For every application involving new construction and modernisation

Hörmann provides a good basis for comprehensive planning. Carefully matched solutions offer you the well designed products for every area.

### Garage doors

Well match your personal architectural style: up-and-over or sectional doors with colourful coatings or a Decograin surface.

### Door operators

Enjoy extra convenience and security: Hörmann operators for garage doors and entrance gates.

### Steel security doors

Hörmann provides you with safe and sturdy security doors in various grades. There will be one to fit your needs.

### Steel doors

Sturdy doors for your entire home, from the basement to the roof.
